EXAMINER'S AMENDMENT

The following is an examiner's statement of reasons for allowance:

The claim 5 is allowable over the prior art of record because the teachings of the references taken as a whole do not show or render obvious the combination set forth, including:

one manual operation means that is manually driven; and a drive force generation/transmission mechanism that generates a drive force by utilizing a force applied from the one manual operation means and transmits a drive force selectively to the n article moving mechanisms as an operation source therefor, the drive force generation/transmission mechanism including a generator that generates an electric power by utilizing a force applied from the one manual operation means, n motors correspondingly provided for the n article stockers and selectively driven by utilizing the electric power generated by the one generator provided for the n article stockers and a motor selection/drive device that drives only one of the motors selected when operating the manual operation means, and n coin collecting devices provided correspondingly at the n article stockers to collect a required number of coins for dispensing the article,

wherein the n article moving mechanisms are constructed to operate by utilizing the output of the corresponding motors as the operation source~;

wherein the motor selection/drive device is constructed to select the motor corresponding to the coin collecting device to which the required number of coins have

Art Unit: 3651

been inserted and to supply the electric power from the generator only to the selected motor; and

wherein the coin collecting device is constructed to collect the inserted coins after the article has been moved into the article guide path by the operation of the article moving mechanism in combination with the rest of the claim language is not taught or fairly suggested by the prior art.

The claim 20 is allowable over the prior art of record because the teachings of the references taken as a whole do not show or render obvious the combination set forth, including:

one manual operation means that is manually driven; and a drive force generation/transmission mechanism that generates a drive force by utilizing a force applied from the one manual operation means and transmits a drive force selectively to the n article moving mechanisms as an operation source therefor, the drive force generation/transmission mechanism including a generator that generates an electric power by utilizing a force applied from the one manual operation means, n motors correspondingly provided for the n article stockers and selectively driven by utilizing the electric power generated by the one generator provided for the n article stockers and a motor selection/drive device that drives only one of the motors selected when operating the manual operation means, and n coin collecting devices provided correspondingly at the n article stockers to collect a required number of coins for dispensing the article,

wherein the n article moving mechanisms are constructed to operate by utilizing the output of the corresponding motors as the operation source;

wherein the motor selection/drive device is constructed to select the motor corresponding to the coin collecting device to which the required number of coins have been inserted and to supply the electric power from the generator only to the selected motor; and

wherein the coin collecting device is constructed to permit the inserted coins to be reset only when the article moving mechanism is located at a operation start position in combination with the rest of the claim language is not taught or fairly suggested by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
